

Reading: Final Project Submission Guidelines and Deliverables

Estimated Time: 2 minutes

You have completed a series of labs applying key statistical concepts such as **Descriptive statistics, hypothesis testing, probability distributions, and regression analysis**.

The final assignment brings together all the skills you have learned. In this exercise, you will use the **Boston housing dataset** derived from the U.S. Census Service to perform statistical analysis and present meaningful insights to higher management.

How can you submit the deliverables

You can submit your project deliverables in one of the following ways:

- **Option 1: AI-Graded Submission and Evaluation**

- Complete all the exercises in the notebook.
- After finishing, save and download your Jupyter Notebook file.
- Submit the downloaded file for **AI-based evaluation**.
- Once submitted, you will receive **automated grades instantly**.

- **Option 2: Peer-Graded Submission and Evaluation**

- Complete all exercises in the notebook.
- Upload your completed notebook to GitHub.
- Copy and save the GitHub link to your notebook, as you will need to share this link for peer review..

In this option, you will receive your grades based on the evaluation from other peers.

*We recommend using **Option 1 for faster grading**. However, if you experience difficulties with this method or cannot access it, you may choose Option 2 instead.*

Note: You are required to choose only one submission option — either AI-Graded or Peer-Graded, and not both, to receive grades for the final assignment.
